

# Preparing Your Home For Inspection

## What Home Inspector Looks For

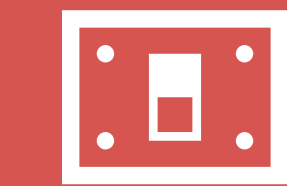

Standing water or crumbling paths on the ground

Whether safety devices such as smoke detectors are working properly or not

If there is any damage to the door or window glasses

All electrical panels, light switches & lighting fixtures in and around the property

Whether heating or cooling systems are in working condition or not

Hanging gutters on the roof, chimney or any other roof defects

## Ways To Prepare For Inspection

Properly clean and declutter your home

Provide complete access to the entire home area including garage & attic

Be sure to maintain a file documenting all the repairs that have been done

Connect all the utilities to a power source to avoid any hassle
